

Instructions for Generating a Google Maps API Key

Assisted Setup

Steps

Step 1: Google Developers Console.....	3
Step 2: Create a New Project.....	3
Step 3: Enable Billing.....	5
Step 4: Setup User Access	6

Purpose

The purpose of this document is to provide you with the steps to be able to generate a Google API key for the location search for stockinstore.

To ensure the searches are limited to just your website & stockinstore instance, we ask each client to create their own API key and restrict the key to all domains/urls including staging/development sites.

To create an API project and give us access to setup the API Keys for you, please login to your Google account and follow the instructions below.

Step 1: Google Developers Console

Go to <https://console.developers.google.com>

Step 2: Create a New Project

- Click "Select a project" drop down on the top menu
- Click the "NEW PROJECT" link (Figure 1)
- Type "stockinstore-companyname-countrycode" as the Project name (eg: stockinstore-mybusiness-au)
- Click on the "Create" button (Figure 2)

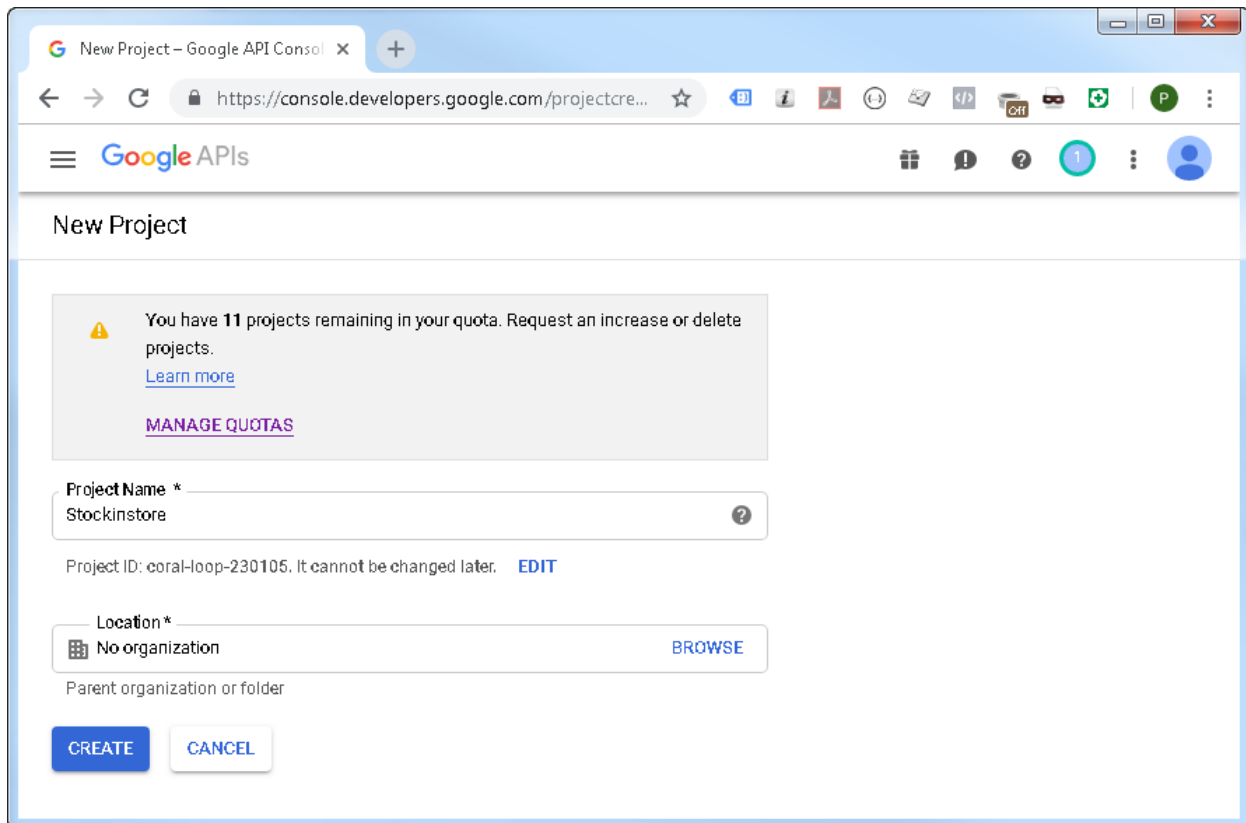

Figure 2 - Set project name

Step 3: Enable Billing

It is now a requirement to enable billing on your project to be able to use the APIs and to update the usage limit for some of the APIs (Figure 3).

Google requires all API keys to be registered in the Developer Console. You are allowed 25,000 API calls per day before Google invokes any charges (equivalent to about 500,000 product page views per month).

IMPORTANT: Make sure you enable Billing even if you know your website won't make more than 25,000 calls per day.

Step 4: Setup User Access

If you provide stockinstore with user access to the newly created project, we will setup your Google Maps API key correctly. Once it's tested and working, you can downgrade our access privileges.

1. From the list of projects, select the Project created in Step 2 above (Figure 4 #1)
2. Open main menu icon (Figure 4 #2)
3. Navigate to "IAM & Admin" > "IAM" screen to add users (Figure 4 #3)
4. Click "Add" button from top menu on IAM screen (Figure 5)
5. From the popup, enter google@stockinstore.com in the 'New Members' input box (Figure 6)
 - o Click "Select a role"
 - o Select "Project" > "Owner" as the role
6. Once this is setup, we will receive the invitation to login and complete the setup of the API keys.
